country.	organizations and individuals working on the Plan have developed conservation goals for each region of the country, identified critical habitat conservation needs and key research needs, and proposed education and outreach programs to increase awareness of shorebirds and the threats they face. The shorebird partnership created during the development of the Plan will remain active and will work to improve and implement the Plan's recommendations.	Shorebird planning regions			
<p>The North American Waterbird Conservation Plan, Version 1 is current</p> <p>This plan is a partnership of state, US and international federal agencies, US and international non-government organizations, academic institutions, private industries, and individuals from across the country.</p>	This document, Version 1 of the North American Waterbird Conservation Plan, provides an overarching continental framework and guide for conserving waterbirds. It sets forth goals and priorities for waterbirds in all habitats from the Canadian Arctic to Panama, from Bermuda through the U.S. Pacific Islands, at nesting sites, during annual migrations, and during nonbreeding periods. It advocates continent-wide monitoring; provides an impetus for regional conservation planning; proposes national, state, provincial and other local conservation planning and action; and gives a larger context for local habitat protection. Taken together, it is hoped that these activities will assure healthy populations and habitats for the waterbirds of the Americas.	<p>Waterbird Conservation Region's Broad species population, habitat, education & information, and coordination & integration goals.</p> <p>Tables including:</p> <ul style="list-style-type: none"> • Conservation status & distribution • Population estimates and conservation status • Distribution and activity <p>Ideas for outreach projects</p>	North America, Central America, the islands and pelagic waters of the Caribbean Sea and western Atlantic, the U.S.-associated Pacific Islands, and pelagic waters of the pacific.	<i>All</i>	<p>Version 1 available: http://www.waterbirdconservation.org/pubs/</p> <p>Jennifer Wheeler Waterbird Coordinator Arlington Square, MS MBSP 4107 4401 N. <p>North American Waterfowl Management Plan, Updated in 2004</p> <p>In Canada the Plan is administered by the North American Wetlands Council</p> <p>In the U.S. the Plan has become a network of Joint Ventures with a variety of partners including several federal land-management agencies, state agencies, private corporations,</p>	Recognizing the importance of waterfowl and wetlands to North Americans and the need for international cooperation to help in the recovery of a shared resource, the Canadian and United States governments developed a strategy to restore waterfowl populations through habitat protection, restoration, and enhancement. The strategy was documented in the North American Waterfowl Management Plan signed in 1986 by the Canadian Minister of the Environment and the United States' Secretary of the Interior, the foundation partnership upon which hundreds of others would be built. With its update in 1994,	<p>Very broad visioning and population goals and objectives</p> <p>Important Waterfowl Habitat Areas in North America</p> <p>Tables include:</p> <ul style="list-style-type: none"> • Population estimates for ducks in NA • Status &Goals for NA Goose Pop. <p>Southeast U.S. Region Waterbird Conservation Plan, Draft</p> <p>Partners This plan is a partnership of state, federal agencies, non-government organizations, academic institutions, and individuals from across the country.</p>	The Plan was developed to focus on regional waterbird populations and habitats and associated conservation issues, and represents the next steps in waterbird conservation called for in the NAWCP.			Florida Georgia North Carolina South Carolina Virginia	Craig Watson Asst. Coordinator, ACJV USFWS 176 Croghan Spur Rd., Suite 200 Charleston, SC 29407 843-727-4707, ext.304 craig_watson@fws.gov
<p>Atlantic Coast Joint Venture Waterfowl Implementation Plan, Update of the plan due in 2005</p> <p>This plan is a partnership of state, federal agencies, non-government organizations.</p>	The Atlantic Coast Joint Venture (ACJV) is a partnership of federal, regional and state agencies and organizations focused on the conservation of habitat for native bird species in the Atlantic Flyway of the United States from Maine south to Puerto Rico. The joint venture was originally formed as a regional partnership focused on the conservation of waterfowl and wetlands under the North American Waterfowl Management Plan (NAWMP) in 1988. This plan is a revision of the original ACJV Implementation plan completed in 1988 that addresses the expanded geographic area and mission of the joint venture as well as the updates to NAWMP. Most importantly, this plan identifies 149 focus areas for waterfowl conservation throughout the joint venture. ACJV partners need to conserve, through protection, restoration or enhancement, more than 638,000	Focus area summaries and tables for each state. Management strategies to achieve objectives. SAMBI Pelagic Conservation Plan, Draft	This plan deals with conservation of pelagic and oceanic seabirds of the Southeast United States Continental Shelf (SECS, Figure 1). Eleven species of pelagic seabirds are highly imperiled, and 36 species of pelagic and coastal seabirds are of high conservation concern. For the SECS, nine species are highly imperiled or of high concern, (Table 1). Very little information has been developed relative to goals and objectives for the conservation of pelagic species for SECS. However, issues, threats, factors leading to loss of habitat, conservation strategies, inventory and monitoring needs, research needs, and education and outreach needs have been suggested (North American Waterbird Conservation Plan, 2002). <p>Bird Conservation Region 14-- Atlantic Northern Forest</p> <p>Partners This plan is a partnership of state, international and federal agencies, non-government organizations, academic institutions, private industries, and individuals from across the country.</p>	<p>For three days in early December 2002, seventy biologists representing two countries, four provinces, five states, numerous non-government organizations, and private industry met in Rockland, Maine, to begin a process for international delivery of all-bird conservation within this region. Over the course of this workshop the participants identified 101 priority species, 132 focus areas, and 49 projects for bird conservation action.</p> <p>Once the products from the workshop are reviewed and finalized, they will be incorporated into a strategic plan for implementing all bird conservation across the BCR. The plan will highlight priority species, focus areas for habitat conservation, priority projects for scientific investigation and conservation action, and tie this information to goals of the major bird conservation initiatives. This plan will help all the partners in this BCR effort to focus on the critical actions needed to fulfill the vision of restoring and sustaining populations and habitats of native bird of this region.</p>	<p>Contact Randy Dettmers For workshop notes and project lists.</p>	<p>To view a map of all Bird Conservation Regions: http://www.nabci-us.org/bcrs.html</p>	<p>Connecticut Maine Massachusetts New Hampshire New York Vermont</p>	<p>Randy Dettmers USFWS 300 Westgate Center Dr. Hadley, MA 01035 413-253-8567 randy_dettmers@fws.gov</p>
